**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-7 and 9-22 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The original disclosure fails to teach the reformer in fluid isolation with respect to the combustor. Applicant fails to disclose where the hydrogen (line 16 in Fig 1) goes after it is separated. Applicant furthermore teaches that "a portion of the hydrogen stream 16 is used as a fuel for the combustion process in the combustor 6" (para 36). In this case, the reformer is in fluid communication with the combustor. In any case, fluid isolation was not specifically disclosed.

***Allowable Subject Matter***

Claims 1-7 and 9-22 may contain allowable subject matter if the 112 rejections above are overcome.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art fails to teach a reformer, separator, combustor, and gas turbine, wherein the reformer is in fluid isolation with respect to the combustor and wherein some of the heat of combustion is used to produce the reformat in the reformer. The closest prior art is WO 02/02460 to Deckman. Deckman teaches all of the structural elements, but fails to teach the reformer and combustor in fluid isolation. Deckman's reformer provides hydrogen to the combustor. US Patent 5,417,051 to Ankersmit also teaches a reformer that is provided with heat from the combustor (Fig 4; heat from exhaust line 7), but the hydrogen gas from the reformer is then provided to the combustor (via line 15a), which puts them in fluid communication.

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-7 and 9-22 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patents 5,832,718 and 5,343,691 teach gas turbine combustors with heat exchanging walls similar to Applicant's.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
